The IAEA

- Established in 1957 as the world's "Atoms for Peace" organization within the United Nations family
- Independent, intergovernmental, science and technology based
- Global focal point for nuclear cooperation
- 167 Member States
- 2,300 secretariat staff, based mostly in Vienna, Austria

The IAEA Statute

Functions – Promote peaceful uses of atomic energy

1. Promote research, development, practical application
2. Exchange of scientific and technical information
3. Exchange and training of scientists and experts
4. Establish and administer safeguards
5. Develop safety standards
and provide for their application

About Environmental Remediation

- A starting point:
 - Cultural backgrounds are surely different worldwide but perception about radiation seems to be very similar

Some Considerations about Remediation

→ providing a *remedy*?

(pharmaceutical product, cure or treatment)

→ '*cleanup*' (making a place 'clean')?; '*rehabilitate*'?;
'*restore*'?

→ measures to:

remove '*contamination*' from land areas?, or
reduce radiation exposure?

Confusing term: '*Contamination*'

- from Latin *contaminat-*, *contaminare*, 'make impure',
from *tangere* 'to touch'
- Religious understanding (e.g., no-kosher food)
- Experts' denotation: presence of radioactivity
- Public's connotation: radiation dangerousness

Facts or purely public perception based on incomplete information?

- How does available information affect the views of people to nuclear energy related projects (e.g. uranium mining, NPP's, Research Reactors, etc ?
- How public perception will affect environmental remediation and decommissioning?

Network of Environmental Management and Remediation

ENVIRONET

IAEA

International Atomic Energy Agency

“ENVIRONET” : objectives

- Organise an expanded range of **training and demonstration events** disseminating proven methodologies, good practices and state-of-the-art technologies;
- Facilitate **information exchange and experience sharing** amongst organizations with advanced programmes;
- **Create a forum** in which expert's advice and technical guidance may be provided.

ENVIRONET in CONNECT – A Platform for:

- sharing information and lessons learned
- transferring knowledge
- comparing approaches implemented by different organisations
- maintaining sustainable relationships amongst

A screenshot of the ENVIRONET website. The top navigation bar includes links for IAEA, NUCLEUS, Site Actions, Browse, Page, and Publish. Below this is a secondary bar with links for CONNECT MEMBERS, CGULS, DISPONET, ENVIRONET, IDN, MSN, NKM, NNE, URF, Learning, CONNECT Bugs and Features, Workshops, and NC Space. The main content area is titled "Network of Environmental Management and Remediation (ENVIRONET)" and features a large heading, a sub-heading, and a paragraph of text. To the left of the main text is a sidebar with links for Connections, Events, Events Calendar, Past Events, Future Events, ENVIRONET Annual Forum 2013, ER Resources, Multimedia, eLearning, ER Fundamentals, Discussions, Forum, Thematic Areas, ENVIRONET Document Workspace, and Environmental Remediation Wiki. To the right of the main text is a section for ENVIRONET Announcements, which includes a link to a working group and a link to a symposium. The bottom right corner of the page shows a status bar with the text "Retired in Progress" and "05:41:05".

Projects of Environet

Training Material Consists of Five Modules:

1. Introduction to ER;
2. The ER Planning Process;
3. ER Implementation;
4. Post-Remediation Management; and
5. Implementation examples

- E-learning material in cooperation with the Argonne National Laboratory (USA).
- Sponsored by the US Department of State and EPPUNE (Japanese Initiative on Expanded Programme on Public Understanding of Nuclear Energy)
- Duration – 6 hours
- Target Audience: Public or Stakeholder Groups, Regulators, Educational Institutions, Junior Engineers and Scientists, Executive Managers and Funding Entities
- Already uploaded in IAEA CONNECT Platform

Removing and Disposing of Contamination

Source: Argonne National Laboratory

Contaminated soils can be **excavated and disposed** of elsewhere. Buried contaminated waste such as drums and contaminated objects can also be unearthed and removed from a site.

This option presumes an **acceptable disposition point** - usually a low level radioactive waste disposal facility designed to safely receive and store contaminated material for perhaps an indefinite period of time.

Contaminated groundwater can be pumped and filtered to remove contamination and the resulting waste stream disposed of elsewhere. Disposal requirements for treated water will depend upon the degree to which the radionuclides can be removed.

The CIDER Project

- ❑ **Objective:** to improve current levels of performance on decommissioning and environmental remediation projects, by:
 - **Raising awareness at a policy level** and promote greater cooperation amongst Member States dealing with disused facilities and sites;
 - Developing a **baseline report** for use by policy makers that provides a global overview of liabilities, discusses constraints and provides recommendations on how these may be overcome (Phase 1); and
 - Proposing **specific actions** (at national, regional or international levels) to address constraints to progress

CIDER Project objectives and organization (3/3)

Coordinating Working Group (CWG)

Chair/Vice-Chair Christine Gelles (US)
Evgeny Kudryavtsev (Russian Federation)

Scientific Secretaries
Horst Monken Fernandes
Patrick O'Sullivan

International organisations:
Pierre Kockerols (EC-JRC),
Mike Thurmann (UNDP),
Gunther Grabbia (EBRD)

WG1: Policy, regulatory
and financial framework

Reno Alamysah (Indonesia)
Steve Hardy (UK)

WG2: Technology and
infrastructure

Alexandre Oliveira (Brazil)
Sarah Roberts (US)

WG3: Social and
stakeholder issues

Katarina Konstantinova
(Ukraine)
Sebastian Schneider
(Germany)

CIDER Phase I – Survey to identify main common barriers for D&ER

- ❑ Finance
- ❑ Lack of infrastructure for waste management
- ❑ Lack of technology
- ❑ Lack of regulatory framework
- ❑ Lack of national policy
- ❑ Lack of qualified personnel
- ❑ **Stakeholder opinion / resistance**
- ❑ Uncertainty over the end state (environmental remediation)

The Baseline Report

- Executive Summary
- 1. Introduction
- 2. Overarching principles and constraints related to programme implementation
- 3. Technological Issues
- 4. Resource constraints
- 5. Societal issues
- 6. Summary
- 7. General conclusions
- 8. References

Baseline Report - Societal issues

- **Societal constraints and approaches to overcome them**
 1. Limited technical knowledge and understanding of the issues and process
 2. Groups and individuals opposed to the programme
 3. Concerns related to the waste disposal on site
 4. Different demands and concerns between stakeholders
 5. Limited budget to cover stakeholders demands
 6. Negative experience with the D&ER programmes
 7. Lack of support by the governmental authorities to implement D&ER
 8. Changing the administrative procedure and legal framework related to D&ER programmes
 9. Lack of trust between stakeholders
 10. Lack of recognition of links between environmental, economic and social concerns
 11. Constraints that hinder progress in stakeholder involvement in D&ER programmes

Proposal for CIDER Phase 2

Sub-project:

‘Developing and implementing a communication and stakeholder involvement strategy in the framework of D&ER programmes’

IAEA

International Atomic Energy Agency

Objectives - Phase II

- Pilot study to implement a communication and stakeholder involvement strategy in:
 1. One site focusing on environmental remediation
 2. One site focusing on decommissioning
 3. Estimated duration: 2 - 3 years
- Identify the key stakeholders for the given project;
- Identify the most relevant societal constraints for each site;
- Develop an effective communication and stakeholder involvement strategy especially designed for the selected site(s) with a view to overcome the identified constraints;
- Implement the strategy and assess its effectiveness;
- Develop a lessons learned document reporting on the effectiveness of the implemented strategy; analyzing any deviations between the initial ‘theoretical’ strategy and the implemented ‘in reality’ and proposing further adjustments (if necessary).

Summary

- The IAEA provides coordination with the hosting organizations of the project and monitors progress, involving IAEA staff and IAEA experts.
- Commitment from Member States and relevant authorities is required.
- Problem holders at candidate sites will need to undertake several actions and assess effectiveness of the communication and stakeholder involvement plan on a regular basis, with IAEA support.
- Social sciences experts at national level and the local community need to be involved.
- Depending on the project duration (estimated 2- 3 years), at least 2 expert meetings and one visit to the site are foreseen.
- Output: a lessons learned report highlighting how communication and stakeholder involvement is applied *in practice* in D/ER projects to overcome societal constraints.

Thank you
